

Cache Peak, Idaho

Independence Lakes Area

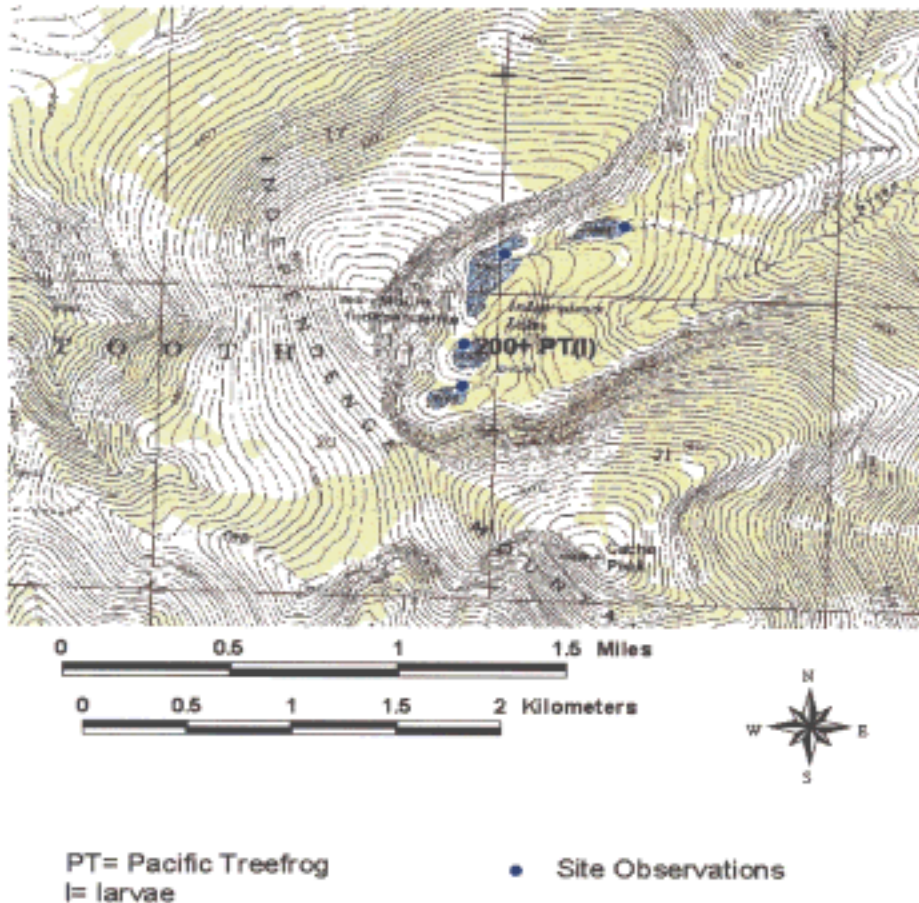

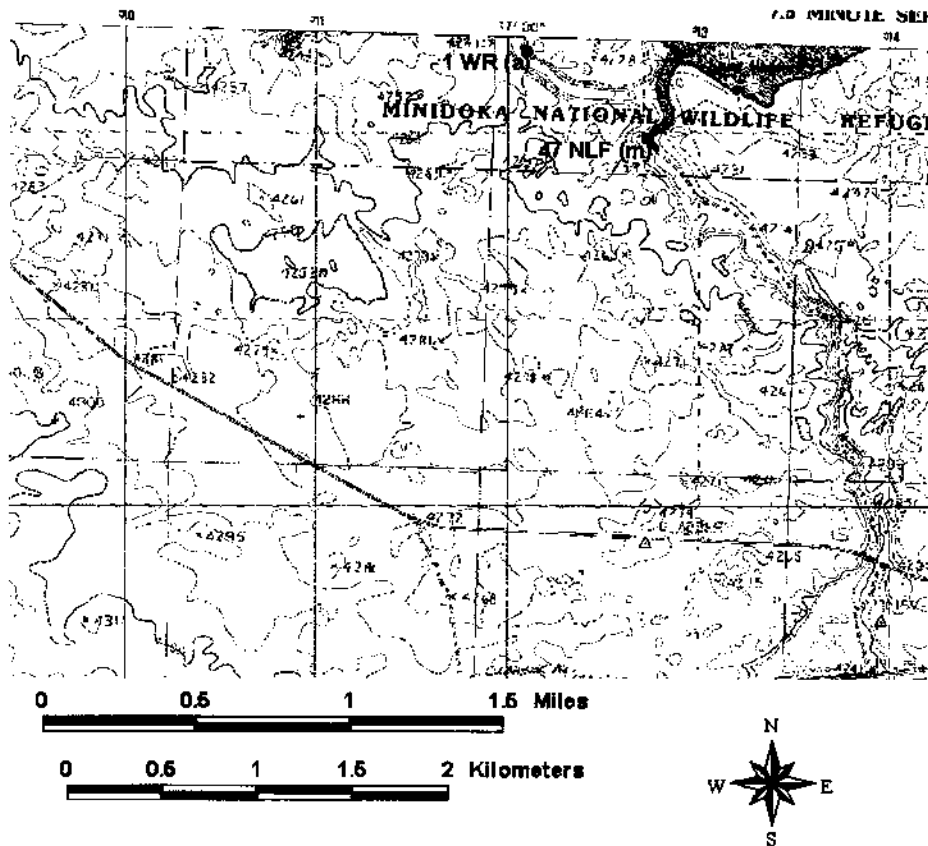

Figure 27. A portion of the Cache Peak Quadrangle, Idaho 7.5 minute series (Topographic) that shows the observed species and their distribution for this area. The labeling numbers refer to the number of individuals observed, the letters represent species identification codes, and the letters in parentheses identify the observed life stages. The sites with no corresponding observation labels show the location of the Independence Lakes where no species were detected.

Lake Walcott SE, Idaho **Bobcat Canyon Area**

NLF= Northern Leopard Frog
 WR= Western Rattlesnake
 a= adult
 m= metamorph

● Site Observations

Figure 28. A portion of the Lake Walcott SE Quadrangle, Idaho 7.5 minute series (Topographic) that shows the observed species and their distribution for this area. The labeling numbers refer to the number of individuals observed, the letters represent species identification codes, and the letters in parentheses identify the observed life stages.

Lake Walcott West, Idaho

Southwest Coves Area

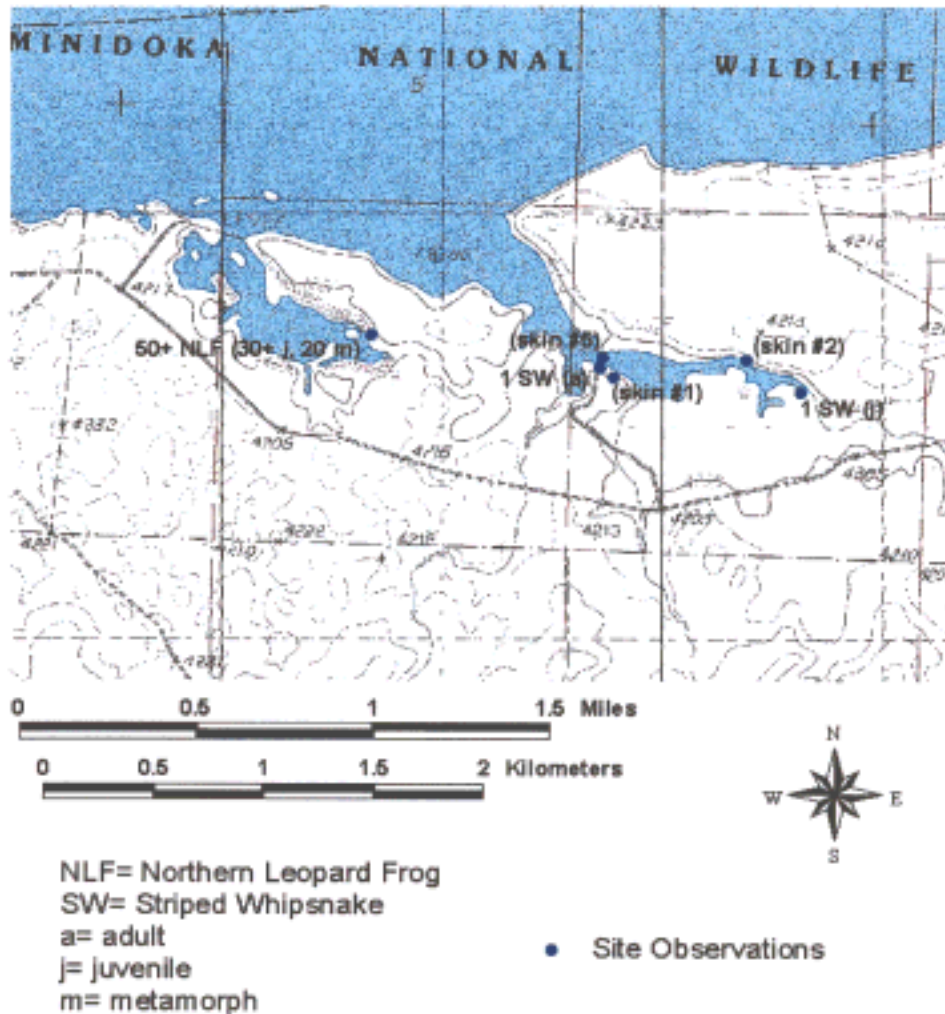

Figure 29. A portion of the Lake Walcott West Quadrangle, Idaho 7.5 minute series (Topographic) that shows the observed species and their distribution for this area. The labeling numbers refer to the number of individuals observed, the letters represent species identification codes, and the letters in parentheses identify the observed life stages. Snake skin #5 was identified as *Thamnophis*, but the species could not be determined. Snake skins #1 and #2 could not accurately be identified.

Lake Walcott West, Idaho

Wildlife Refuge Area

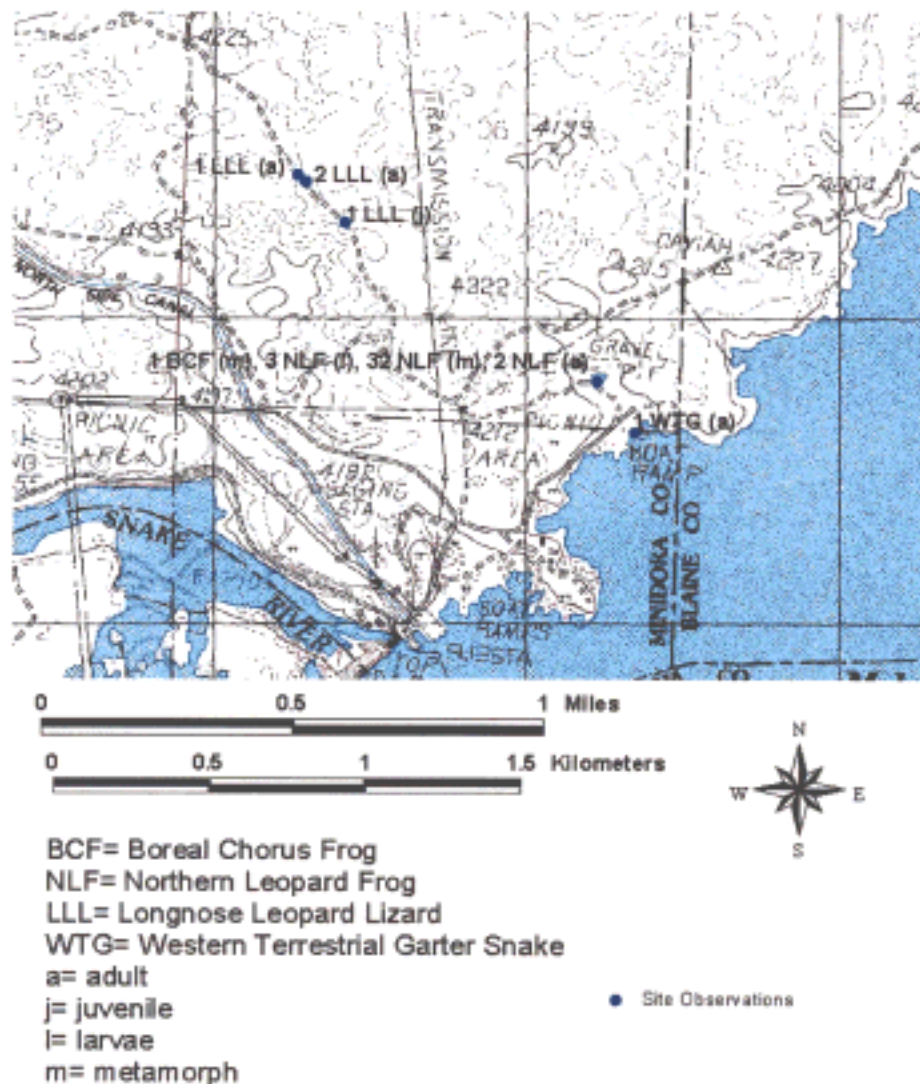

Figure 30. A portion of the Lake Walcott West Quadrangle, Idaho 7.5 minute series (Topographic) that shows the observed species and their distribution for this area. The labeling numbers refer to the number of individuals observed, the letters represent species identification codes, and the letters in parentheses identify the observed life stages.
